Mark Steele Exposed

Published: [7 March 2019](#) Written by [Annie Logical](#) No comments Categories: [5G EMF](#), [General Information](#)

Spread the word far and wide.

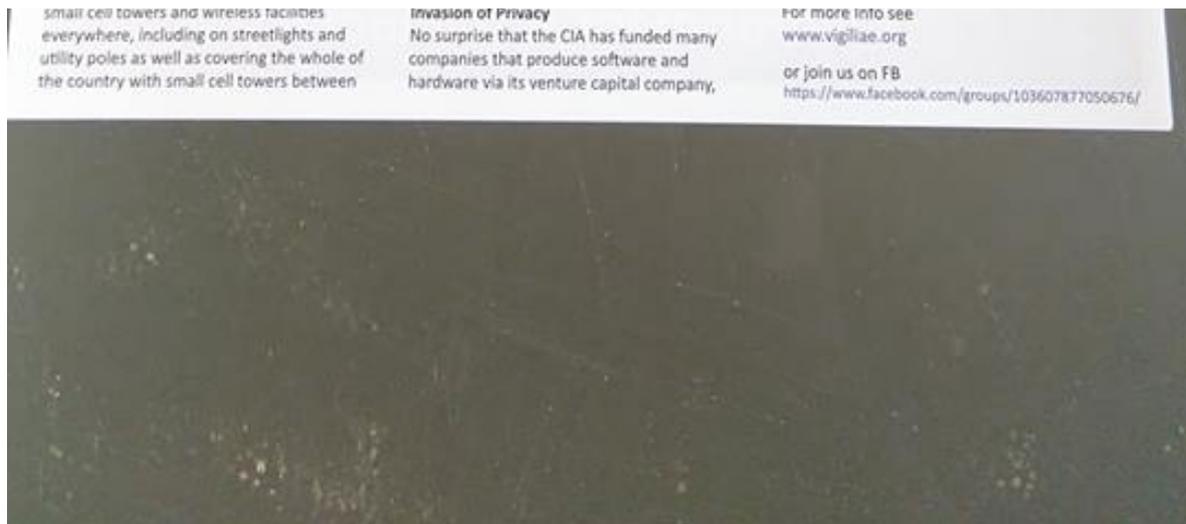

Many people have heard of Mark Steele, seen his YT video,s and listened to his many interviews in which he claims that he is fighting the council in Gateshead, has an ongoing Crown court case and that Gateshead lamp posts are emitting 5G.

What if you learn through evidence that none of this is true? Before you question my views on 5G, I have been keeping this website specifically to share research on the dangers of 5G, updating it to show which areas have been testing, which companies are involved, which Govt and EU agencies have been pushing it and who has been financing the roll out of this Smart Agenda, which we all know is far from Smart and is a danger to us all.

I have also been running a 5G Mass Action campaign on my website and FB in which over 200 areas around the UK have

been reached with over 50,000 leaflets. So I can hardly be called a '5G denier' which is the term used by Steele to try and discredit me, but, forget about he said, she said etc, as the following Information can be verified with evidence and facts.

5G Mass Action Leaflet available for download on this website

I first came into contact with him at the beginning of my campaign, at that time he was challenging the council in a YT video, I thought that it was great that someone was standing up to them, I made contact with him and after my Ritchie Allen interview, I mentioned this man to Ritchie as someone he might want to talk to about 5G.

He had many interviews after that, although he seemed reluctant to mention the leaflet campaign which was promoting his new political group called Save Us Now or SUN.

I often commented on the issue of " how could a political party actually save us now, given that it would take a long time to establish and 5G was already upon us and in many areas."

I decided that I should get some experts involved so I contacted members of an EMF research group to ask about Gateshead and the 5G connection.

To my astonishment, I was informed that they had offered to go to Gateshead after talking to Mark, that they had offered to test the lamp posts and the people who had been affected, all free of charge.

This was offered several times and was refused by Mark. He called them Charlatans and was aggressive on the phone claiming later that they had made claims that were untrue, he claimed that this well know Anti EMR had stated on the phone that Gateshead was not 5G, even before they tested it so he used that as his reason for disrespecting them. He was abusive to them on the phone and called them Charlatans, he also accused them of working for the Govt. I would like to share with you, who these people are and evidence that they DID not state in advance that Gateshead was not using 5G. In fact quite the contrary is true.

Firstly, I will share with you, who this group are.

Alasdair Philips is one of the UK,s leading voices on Electro-Magnetic fields and RF, he has run Powerwatch which has been researching the links between electromagnetic fields (EMFs) and health risks for about 30 years, and is completely independent of government and industry. <https://www.powerwatch.org.uk/docs/aboutus.asp>

Alasdair Philips is also a member of SSITA, Safe Schools Information Technology Alliance which addresses the concerns of Wi-Fi in schools.<https://ssita.org.uk/about-us/>

He is a member of BEMRI

The Bio-Electromagnetic Research Initiative (BEMRI) has been formed to create a research portal, for the scientific community and interested members of the lay public, which helps to rapidly disseminate international research findings, best practice measures and scientific hypotheses on matters related to electromagnetic (EM) phenomena.<http://www.bemri.org/>

He is also an advisor to Radiation Research Trust and was once the news letter editor for Electronics and Computing for peace. He has also been involved in investigations into

the **misuse** of electromagnetic weapons by the military.

Alasdair Philips is a scientist who has been involved in research in this area for the past **50** years.

He also is involved in two companies that supply equipment to test EMR and RF and protective shielding items.

Here is Alasdair Philips being interviewed by Dr Mercola on YT. https://www.youtube.com/watch?v=NYV8YWESt_Y

In June 2018, he had a study published in the peer reviewed Journal of Environmental and Public Health, in which he studied the rise of brain tumours between 1995 to 2015 and concluded that one possible factor is the widespread use of cell phones. <https://microwavenews.com/news-center/gbms-rising-uk>

Alasdair Philips has chaired and presented at international conferences on these topics.

EMFields was established to provide high quality measurement equipment and screening products to protect people from the ever-increasing levels of Electromagnetic radiation, or electrosmog, in our environment designed by Alasdair Philips. <https://emfields-solutions.com/aboutus.asp>

Alasdair Philips is also one of the 230 scientists and doctors who have signed a moratorium to stop the 5G roll out.

And yet when reports came out from Mark Steele in Gateshead that the lampposts were emitting 5G, Mark was contacted by Alasdair Philips.

Does this man and his background come across as a charlatan to you?

Steele claimed that they had stated that Gateshead lampposts were NOT 5G, and that is the reason he did not entertain them.

Here is a copy of the email that shows this is NOT the case. I have been in contact with Mark Steele and also offered to visit Gateshead with a range of more professional test equipment than he used. He used a very basic "broad band" [isotropic] meter that would pick up any signal within 50MHz - 3.5GHz coming from all directions. He would need equipment that includes a Log Per [Directional] antenna and indeed covers a wider range of frequencies. Did you see the video clip of waving his meter pointing towards a street light he claimed was producing 4,000 millivolts, but afraid not possible coming from the small transmitter where he was pointing his meter. [Not suitable meter for the particular task]

Along with another member of our group, have phoned him several times to offer my services freely if he could arrange for me to carry out a free survey for members of the public of whom he has contact who are suffering health issues that is suggested are coming from these lamp post transmitters that he claims are 5G. Mark may be correct about 5G, but until proper measurements are carried out I cannot make comment. We would like to take measurements at Gateshead, though must ensure we have with contact someone like Mark and most importantly independent folk who suffer the effects of ELF pollution living in close proximity to these transmitters.

We find it very strange he has not taken us up on our offer. I told him it could help him with his very worthy campaign and we certainly need more people like Mark to bring about awareness.

If you know of anyone living in Gateshead please let me know. As a scientific research group [bemri.org] we

welcome people such as you sharing information mutually beneficial.

Of course, I found this information rather startling and questioned Steele, when he lied about the experts and what they had actually said, alarms bells went off for me. Why not get as many experts on side as possible?

At this point, I made contact with a member of the public who lived near Gateshead and arranged for her to meet with the expert to measure the very same lamp posts in Gateshead.

Areas tested by Steele and BEMRI for 5G

A private report was sent on the findings, here is a copy of that report.

Report on Gateshead Lampposts to investigate alleged 5G signals

In May 2018 Bemri visited Gateshead at locations where it had been suggested 5G transmitters' were mounted on

lamp posts and were operating and producing around 4,000 mV. [4 mV/m] These were said to be found at locations such as the shopping arcade [by bus stop] at Whickham from video recordings by a certain third party. The instrument used by the third party was an isotropic RF meter that records signals received from all directions not simply the direction the meter is pointing.

We used professional Gigahertz RF test meters and spectrum analyzer and the strongest signal recorded at this location was 1.4V/m emitted from an array of mobile phone transmitters located a few hundred yards down the opposite side of the Main Rd from the shopping arcade. After testing around a five mile radius from Whickham readings ranged from 0.25 V/m to 6.5 V/m.

It could be seen from the video recordings of the said third party RF meter readings consistently ranged around a 4V/m mark wherever any measurements were taken, even from the inside of a car travelling along a main carriageway, which is really not possible unless perhaps a Smart phone was nearby or used to video the RF meter readings. Trying to monitor signals from the inside of a car [especially moving vehicles] is a rather pointless exercise.

A Smart phone easily produces readings around levels shown in these video recordings, even when it's not in transmission mode. All RF meters monitor frequencies from sources with the highest power density, not lower, or accumulation of other signals.

We could not find 5G signals coming from street lighting at any location we surveyed.

Bemri is an independent self funded research group strongly apposed to 5G and other electromagnetic pollution, of which long proven causes harm to all biological systems.

I then contacted a lady who was part of the 5G campaign and who had also supported Steele in his early days, she was instrumental in getting him online interviews. Living very close to Gateshead, she agreed to meet up with the experts to test the same lampposts that Steele had shown in his YT videos.

The following is a statement from Lizbeth, the lady who accompanied the researcher.

Gateshead Resident and EMF Experts Show NO 5G in Gateshead

Spread the word far and wide. Recently we found out the news via Ann Marie Carey that Mark Steele had been contacted by Bemri, Bio Electromagnetic experts with 60 + years of experience in EMF research. Their kind offer to come to Gateshead for free, and measure RFs coming from the street lights, to test for any possible ... Continue reading

At this point, an argument ensued between myself and Steele and I decided to use my skills as a researcher to find out more about him, his twin brother Graham who goes by the name Ben Travis and their company known as Reevu and Reevu Worldwide Ltd.

This is when I discovered that his company had been one of

the many companies consulted by the : **North East Local Economic Partnership Smart Specialisation Report.**

The North East LEP covers the local authority (LA) areas of County Durham, Gateshead, Newcastle, North Tyneside, Northumberland, South Tyneside and Sunderland.

In this context, 'smart specialisation' has been described as "a process of developing a vision, identifying competitive advantage, setting strategic priorities and making use of smart policies to maximise the knowledge-based development potential of any region, strong or weak, high-tech or low-tech". This report seeks to assist the North East LEP and its partners to define a starting point for developing a smart specialisation process and build on this foundation through 'smart' intervention strategies to bring the 'international exemplar' ambitions to a credible fruition.

The smart specialisation research project has been part-financed by Technical Assistance through the North East of England European Regional Development Fund Programme. This is part of a Technical Assistance project supporting the North East LEP to prepare for the 2014-2020 programme of European Funding.

Here we have a copy of that report and we see that Reevu Worldwide were mentioned as one of the collaborators named by the council.

This is a report <https://www.ncl.ac.uk/media/wwwnclacuk/curds/files/nsmart-specialisation.pdf>

North East Local Economic Partnership Smart Specialisation Report

This document names Mark Steele's company as one of the collaborators that the council consulted on this Smart Specialisation report on page 55.

SIF thematic issues including innovation, ICT, SMEs, low carbon, sustainable transport, employment, social inclusion and skills.

The exemplars have also been assessed in light of their strategic 'fit' with the national industrial strategy, the national innovation and research strategy, the economic development priorities of the seven local authority (LA7), and Horizon 2020: The EU's Framework Programme for Research and Innovation.

The S3 project team maintain that a vision for the North East LEP area of delivering 'more better jobs', through building on the strengths of 'making, trading and innovating', and addressing the 'enabling factors' of 'connectivity, skills and community' can start to be developed around these four exemplars, although as will be evident from the conclusions to this report other areas of economic activity have the potential to be explored in similar ways.

Page 33

According to the document, the report states the exemplars, (those companies that have been consulted, one of which is Steeles) have been assessed in light of their strategic fit with the national industrial strategy, the national innovation and research strategy, the economic development priorities of the seven local authority (LA7) and Horizon2020. The EU,s Framework Programme for Research and Innovation. So, if Steele has his own company as a collaborator with the council on the smart agenda, a company that is run by himself and his brother, then this raises many questions. How can he be a collaborator on the Smart Agenda alongside Gateshead Council whilst fighting them about 5G? It also raises questions on his story about how he came to be charged by the council which involved two female councillors, one of whom was the deputy leader of the council. He claims to have not known the identity of the

women which prompted him to go back indoors twice to google who they were whilst they patiently waited outside? This is same woman who he stood in front of during his very first YT video that was filmed, of himself confronting the same council in the council chambers?

So, are we to believe that this man has been collaborating with the council on the Smart Specialisation programme yet is in dispute with them over 5G?

Now it appears that not only is he unwilling to get expert help to test Gateshead lampposts but he is actually known to have collaborated with the the council. The North East Local Economic Partnership also states that it is also part funded by the EU development fund which is Horizon2020. This project was to prepare the North East Region to prepare for the 2014-2020 programme of EU funding for the roll out of the Smart agenda.

The screenshot shows the European Commission website page for Horizon 2020. The URL in the browser is <https://ec.europa.eu/programmes/horizon2020/en/what-horizon-2020>. The page features the European Commission logo and a navigation menu with 'Commission and its priorities' and 'Policies, information and services'. Below the logo is a search bar. The main content area is titled 'Horizon 2020' and includes a breadcrumb trail: 'European Commission > Funding, Tenders > Funding opportunities > Funding programmes > Horizon 2020 >'. A navigation bar contains links for 'What is Horizon 2020?', 'Find Your area', 'How to Get funding?', 'News, Events & Publications', 'Projects', and 'The next Framework Programme'. The main content area is divided into a left sidebar with links like 'What is Horizon 2020?', 'What is a Work Programme?', 'Horizon 2020 programme sections', 'Experts', 'Official Documents', 'Evaluations and monitoring', 'History', and 'Horizon 2020 statistics'. The main content area has a heading 'What is Horizon 2020?' and tabs for 'Article' and 'Newsroom'. The article text states: 'Horizon 2020 is the biggest EU Research and Innovation programme ever with nearly €80 billion of funding available over 7 years (2014 to 2020) – in addition to the private investment that this money will attract. It promises more breakthroughs, discoveries and world-firsts by taking great ideas from the lab to the market.' Below this, it says: 'Horizon 2020 is the financial instrument implementing the Innovation Union, a Europe 2020 flagship initiative aimed at securing Europe's global competitiveness.' To the right of the article is a globe image and social media links for '#H2020'.

Horizon 2020 is the EU funding body that is pushing the Smart agenda.

Horizon2020 is the EU funding body that has over 2300 UK organisations, agencies govt bodies, councils

and education centres on its payroll.

This is part of a Technical Assistance project supporting the North East LEP to prepare for the 2014-2020 programme of European Funding.

The payroll includes the North East Combined Authority which Newcastle and Gateshead are part of.

<https://www.fabiodisconzi.com/open-h2020/per-country/uk/index.html?fbclid=IwAR1QSxR4oGAO3pmirPqkuDOxrSHRnBVKNVko4RtNVSfVK1lfzHTBzcGpUW0>

Horizon 2020 is no stranger to Steele, it appears, his LinkedIn profile lists it as one of his chosen groups. See his profile here:

So, whilst we have Horizon2020 being the EU,s biggest funding body for 5G and the Smart City agenda, Gateshead council are holding meetings with companies (exemplars) to discuss how to implement the next stage of funding and Steeles company is included?
This now prompted myself and many others to question his stance.

The 5G Infrastructure Public Private Partnership

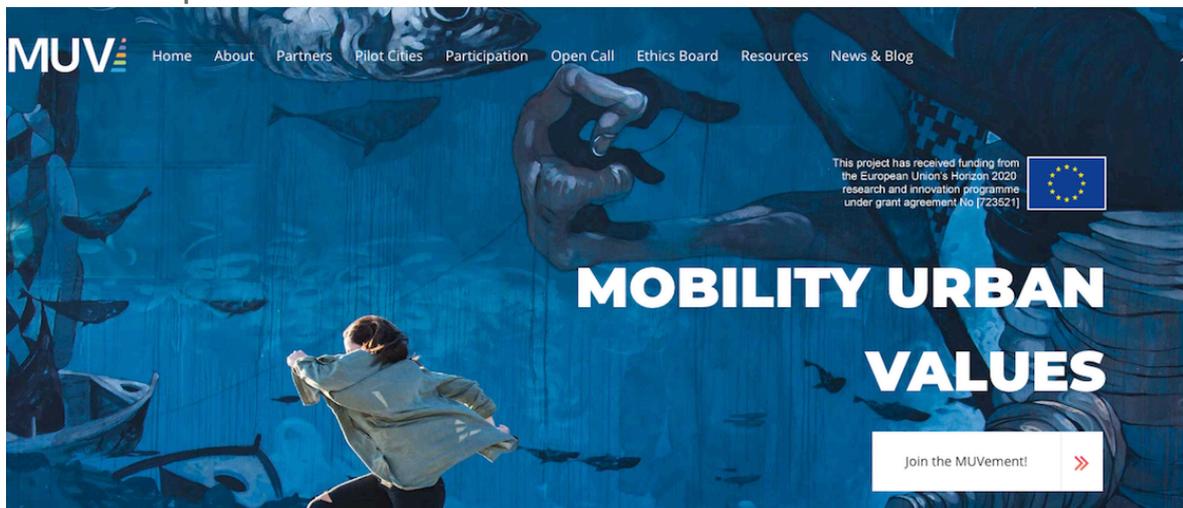

About us Getting Involved Plans & Papers Events **European 5G Activities** Media & News

5G RESEARCH IN HORIZON 2020

5G RESEARCH IN HORIZON 2020 WEBCAST

This webcast focuses on key aspects of the 5G EU research activities and the Horizon 2020 programme funding opportunities to implement the 5G-Public Private Partnership (5G-PPP). The 5G-PPP focuses on communications infrastructure with an EU budget of € 700 million for research, development and innovation over the next seven years. € 125 million are available in the first call for proposals, which closes on 25 November 2014.

Upon further investigations, links between Gateshead council and Mark Steele were undeniable. For instance, Steele also shares the group Civitas Urban Mobility on his LinkedIn profile.

Another Horizon2020 project funded by the EU

Sister projects

In total there are four new CIVITAS projects (including SUNRISE) with a focus on urban districts or neighbourhoods, based on the assumption that neighbourhood-specific characteristics (proximity, trust, identity) can be strategically utilised to trigger new types of mobility solutions.

Guided by the CIVITAS coordination and support action project CIVITAS SATELLITE, SUNRISE will cooperate closely with its "sister" projects [Cities4People](#), [METAMORPHOSIS](#) and [MUV](#) that are funded under the same call and offer great potential for cooperation and exchange of experiences.

THE CIVITAS INITIATIVE
IS CO-FINANCED BY THE

Gateshead

» [Gateshead](#)

C is a city of 78,000 inhabitants, located on the southern bank of the river Tyne, opposite Newcastle upon Tyne, England. Gateshead is the largest city in the Metropolitan Borough of Gateshead. The city is also known among experts of the "famous for the "Gateshead Interchange" where trains meet metro and bus lines...

Modal split data was not obtained for the city of Gateshead, however it was available for the Tyne and Wear metropolitan area of which Gateshead is a part. According to data from the 2002 Labor Force Survey, the split in Tyne and Wear was 4 percent for heavy rail, 3 percent for light rail, 16 percent for busses, 68 percent for cars, 9 percent for walking and nothing for bicycle.

Gateshead's strategic approach to transport management is currently defined by the Tyne and Wear Local Transport Plan 2006-2011, which was prepared by the Borough of Gateshead and four neighbouring local

authorities. Its main objectives are:

- maintaining and improving levels of personal accessibility and linkages within, between and beyond the boundaries of Tyne and Wear;

Gateshead Council and Steele both share a link to this

The CIVITAS initiative which supports demonstration and research projects to implement innovative measures in clean urban transport, and the European Industrial Initiative on Smart Cities & Communities aiming at making the production and use of energy in cities more sustainable and efficient will also be natural cooperation initiatives of a KIC on urban mobility.

A KIC in this area could also establish links with the transport and energy related European Technology Platforms (ETPs), the Public Private Partnership (PPP) on European Green Cars, and the numerous Framework Programme (FP) projects in this area. The KIC would take into account the research priorities and action plans defined in the framework of the ETPs and the research work carried out so far by the PPP and FP projects to enhance and accelerate the take up and exploitation of these research outcomes.

So the Civitas Initiative supports demonstration and research projects to implement innovative measures on Smart Cities and Communities.

So, is Steele part of a research initiative?

Civitas has many research initiatives. <https://civitas.eu/projects/research>

And in an extraordinary coincidence one of the initiatives is called the SUNrise project.

[Visit MUV for more details.](#)

CIVITAS Sunrise

Sustainable Urban Neighbourhoods – Research and Implementation Support in Europe

The Sunrise project will develop new participatory tools to facilitate collaborative ways to address mobility challenges at the neighbourhood level. The project's mission is therefore to develop, implement, assess and facilitate co-learning about new, collaborative ways to address common local urban mobility challenges through "neighbourhood mobility labs". These laboratories will lay the foundation for the Sustainable Neighbourhood Mobility Planning (SNMP) which in turn builds on the Sustainable Urban Mobility Planning (SUMP) concept.

And the following is an extract from the Sunrise project.

Strong collaboration between the Council, local and cross border partners (SUNRISE team) as well as active engagement of the stakeholders will be essential for this project. Local resources, knowledge and skill will form the backbone of the implementation to help ensure ownership of the output and community pride.

We will be trailing the concept of 'Living Labs' in the context of physical interventions. The Living Lab is co-creation approach integrating research and implementation processes. These are integrated through the co-creation, exploration, experimentation and evaluation of ideas and the active sharing of lessons learnt. In our specific pilot, we will develop a campaign around the implementation of the co-created solutions that helps with their simultaneous application, dissemination and showcase.

We will organise street trial events which will involve the use of a 'street kit' (temporary street furniture, temporary paint, planters etc.). This will enable local stakeholders to test the solutions co-developed through participation in the SUNRISE Co-creation Forum and provide feedback and modifications that can shape the proposed design solutions implemented by the end of the project.

SUNrise Civitas project involving living labs that use street furniture.

One of the initiatives of the Civitas projects funded by Horizon2020 involves local councils and local partners, trialling the concept of 'Living labs' integrating research and implementation processes. They even state that they intend to create a campaign around the project using street trial events which will involve the use of street kit. To enable local stakeholders to test the solutions of the project.

With both Gateshead council and Steele proven to be linked to this same EU funded Horizon2020 project called Civitas Urban Mobility and its agenda using neighbourhoods as street labs with street furniture to test solutions, his credibility as a 5G campaigner is now open to dispute.

And the following information should also be shown.

According to the SUN rise initiative, which stands for Sustainable Urban Neighbourhoods,

SUNRISE

*Sustainable Urban Neighbourhoods
Research and Implementation
Support in Europe*

In this passage it states that each of the core group can share a similar logo resembling the mother-logo.

The CCF is coordinated and supported by a → Core Group.

Whereas CCF is the term used for consortium internal communication, the forums in each action neighbourhood can, of course, operate under a different name in the respective local language.

Examples:

- Bremen: e.g. Visionszirkel Hulsberg
- Southend: e.g. CityCentre 2030 Platform
- Zuglo: e.g. ...

Each of the six local CCFs can also have its own logo - ideally somehow reminiscent of the SUNRISE "mother-logo".

Author/Reviewer: Rupprecht / urbanista

9.1 Co-development

The term Co-development denotes one particular phase within a larger → co-creation process. In particular, it highlights the fact that citizens and other stakeholders are actively involved in the development of concrete → action plans. In the time sequence of a co-creative innovation chain, co-development follows the initial phase through which problems and challenges are co-identified and it builds the basis for the ensuing phase, during which action plans are → co-implemented.

Then we have Steele creating a political party called SUN, Save Us Now as a platform to fight 5G.

SAVE US NOW.ORG.UK

SUNRISE

*Sustainable Urban Neighbourhoods
Research and Implementation
Support in Europe*

Rather reminiscent of the SUN mother-logo in my estimation.

I then began to question the validity of the political party known as SUN. Why does Steele hardly give it a mention in his numerous interviews? Why does his party political group website never discuss all the many areas that 5G is being trialled and tested in? Why only Gateshead? (Even after the experts have shown there is NO 5G in the lampposts in Gateshead) Why is Mark Steele's twin brother Graham, named as a candidate for the party yet he appears on FB as Ben Travis, is that not illegal? Why does Steele have another SUN party candidate who also uses several different names

and verbally attacks anyone who dares to question Steele or the narrative of the non verifiable claims made by him? How can a political party establish itself within the short period that the roll out of 5G is due?

One of the noticeable traits of those who wish to complicate and create false opportunities for activism is the sharing of advice on how to campaign against it, this is apparent in the websites FOI letter that is being foisted on people to enable them to question our local councils.

This FOI letter contains requests for information that no council would even be able to answer to without massive amounts of time and manpower involved, just one of the many questions asked for every email, letter and correspondence for 2,3 and 4G, which has now been removed from the FOI as a bit too obvious in its ruse.

Needless to say, people have contacted this website to state that they have been met with blanks from their council who have replied to them stating that they do not have the manpower to answer such a long winded request. Jobs a good un!

FYI There are many letters that can be utilised by this website that are short and precise and can be sent to your local council and more importantly, they are not fobbed off as being too much work for any council employee.

Here is proof that the brothers have smart technology on sale on the Israeli Homeland Security website. <https://i-hls.com/archives/17145>

And here is proof that they also have the same merchandise for sale on UK Defence Supplies who are openly affiliated to InnovateUK who are behind 5G technology. <http://www.civil-defence.co.uk/page160.html>

The Court cases

Many people have fallen for the 'initiative' because of the reported court cases that this man has laid claim to. Firstly, let us return to the Gateshead/Steele Horizon2020 connection.

Recently Steele has claimed that he is only affiliated to Horizon2020 Framework because he won an Innovation award from them, one look on the **Horizon 2020 project information** and now also **report summaries** are available on CORDIS. All H2020 projects can be **downloaded from the EU Open Data Portal** . Shows no mention of Steeles company. Nor his name. Even though over 8000 are listed. https://cordis.europa.eu/search/result_en?q=Awards Horizon2020 has over 2300 institutions, govt agencies, councils, health depts, local authorities, universities, police etc on its payroll in the UK.<https://www.fabiodisconzi.com/open-h2020/per-country/uk/index.html?fbclid=IwAR1SUIT8KHTSYH-TaoDIGkL35HDJE03QevfnvhjJVkx3YEUFctV7t8GDDEFQ>

It transpires that the Durban,Gateshead,Newcastle upon tyne, Northumberland and Sunderland Combined Authority are on the payroll of H2020 as are the Home Office, Newcastle County council, Tavistock and the MET office, so organising a court case would not be beyond the realms of impossibility.

In the first instance, a case was heard in the magistrates court and was reportedly adjourned because the magistrate was familiar with the local councillor, a witness in this case claimed that his counsul was Ian Crane although this has never been reported.

A second case was then reported in which he was reportedly fined for his actions against the councillors. In this case he reports that he earns only £5000 a year, really? A man with

his own company?

And this is where it gets highly unbelievable, he then asks for the same case to be heard in a Crown court case, which is reportedly heard in front of Judge Nolan who proclaims that he is a 5G expert.

According to Ian Crane, whom I corresponded with about the authenticity of this case, when I asked for the crown court case number, he sent me this.

Form of Judgment or Order

In the County Court at Newcastle Upon Tyne	
Claim Number	E01NE627
Date	11 October 2018

WATESHEAD METROPOLITAN BOROUGH COUNCIL	1st Claimant Ref
---	--

<https://www.fabiodisconzi.com/open-h2020/per-country/uk/index.html?fbclid=IwAR1SUIT8KHTSYH->

TaoDIGkL35HDJE03QevfnvhjjVKx3YEUFctV7t8GDDDFQ

Now, the problem with this information is that this is NOT a Crown court case, in fact, every Crown court case has to be listed in the law pages, this case nor any other case involving Steele is listed for the date they claim that it occurred. It also transpires that the Judge in question is also a known advocacy trainer named Judge Nolan, which means that he is used to sitting in front of cases that are used as training

exercises.

And let us be honest here, why would a Crown court be hearing a case as trivial as this?

Even the story of the council workers that he reportedly shouted at does not ring true, why? Because he claims that he went indoors twice to google who they were whilst they patiently waited outside, this man had already stood in front of this deputy leader of the council in his so called 'council chamber' episode, in the first instance, when he first became known in public. Remember his first video which shows him when he first came onto the scene as a 5G activist was at the council chambers.

And now it all make sense that he has collaborated with them previously, because between the EU, Horizon2020 and Gateshead council, the Sunrise project, the SUN political party and Steele, gatekeeping starts with Gateshead.

Since this mans claims about Gateshead lampposts came out last year, many people have doubted his claims and asked for proof, people who are knowledgable about trees have stated that his claims made on YT claiming the trees have been affected by 5G are false and have explained to him why he is mistaken, others who are knowledgable on other topics have also confronted him, asking why does he post pictures of frostbite victims and claim its from 5G, or claim that Gateshead has more deaths from Brain cancers than the national average when that information is nowhere to be found via the usual channels such as national statistics or Public health England.

They are all met with the same response as the initial experts who offered to help to prove what he was saying by using expert methods or their own expertise, they are called 5G deniers, govt agents, and even worse.

I think that given the evidence presented here, the public can have a better understanding of why many people are questioning his credibility and his dubious links and hopefully this enables them to make their own minds up about Steele and his political party, Save us Now.
